Attention: Mr. John Doherty

Subject: Report on Environmental Precharacterization Program
Proposed New Engineering & Science Building
University of Connecticut
Storrs, Connecticut

Ladies and Gentlemen:

This report provides the results of our soil precharacterization program and associated environmental recommendations for the Proposed Engineering & Science Building on the University of Connecticut's Storrs, Connecticut campus. This work was undertaken in accordance with our proposal dated 24 October 2013 with addendum dated 10 November 2014, and your subsequent authorization. Thank you for the opportunity to provide these additional services on this project.

The purpose of the precharacterization program was to:

- Complete final design soil precharacterization in preparation for construction incorporating the results of our preliminary soil precharacterization program, which were summarized in our "Report on Geotechnical Engineering Assessment and Preliminary Environmental Precharacterization Program, Proposed Science & Engineering Building, University of Connecticut, Storrs, Connecticut", dated August 2014.

- Characterize soil conditions within the proposed building footprint and in site cut areas relative to the presence of oil and hazardous materials (substances). Borings were drilled in grids at the building footprint with approximately equal areas in plan view. One sample was collected for every approximately 500 c.y. of fill soil and one sample every approximately 1,500 c.y. of underlying natural soil anticipated to be excavated from within the precharacterization grids during building construction. Samples were obtained from borings at the proposed retaining wall to the west of the building and area of regrading to the east at similar frequencies. These frequencies are based on typical industry practice for off-site disposal.

- Classify soils to be excavated and either removed from or reused on the site into groups based on the levels and types of substances detected in the samples. Group classification is determined based on comparison to current Connecticut Department of Energy and Environmental Protection (CTDEEP) Remediation Standard Regulations (RSRs) and typical facility criteria for off-site disposition (i.e., reuse, disposal, recycling, and/or treatment).

- Develop initial soil quantity estimates for various environmental soil classifications for use by the contractor when pricing off-site disposition of excess excavated soils;

- Compile soil management related information to facilitate: (i) obtaining acceptance of excess excavated soils at off-site receiving facilities; and (ii) planning and sequencing of excavation, off-site disposition, and on-site reuse activities with practical minimal additional stockpiling, handling, and testing requirements.

- Serve as a basis for preparation of contractor health and safety plans.

BACKGROUND

Elevation Datum

Elevations in this report are in feet and refer to National Geodetic Vertical Datum of 1929 (NGVD 29).

Existing Conditions and Previous Structures

The site is located on the Storrs Campus of the University of Connecticut as generally shown on the Project Locus, Figure 1.

The site was previously an open and partially landscaped area with various pedestrian walkways on the north half. The south half of the site was occupied by the former Old Central Warehouse building, which was demolished recently. Existing grades are relatively flat within the former building footprint and landscaped areas ranging from about El. 598 at the east end to El. 593 at the west end. South of the former building grade is approximately El. 605.

Proposed Construction

Proposed construction consists of a six-story building with an approximately 16,000 sq. ft. footprint and one basement level across most of the footprint. In non-basement areas, the lowest floor level is planned at El. 598.5. The lowest floor level in the basement is planned at El. 582.5. A utility tunnel will exit the northwest side of the building and connect to an existing tunnel to the north. The tunnel will have a lowest floor level of El. 582.5 at the new building and will slope upward to the existing tunnel at El. 582.9. The proposed development will also include retaining walls, relocation of roadways and parking areas around the new building, new utilities, landscaping, and associated site improvements.

Based on volume estimates provided by Fusco Corporation, we understand that a total excavation volume of 33,200 cu. yd. is anticipated during proposed construction. The estimated total volume is comprised of 17,600 cu. yd. of fill and 15,600 cu. yd. of natural soils.

Site History and Environmental Review

Until recently, the site was primarily occupied by the Old Central Warehouse. Details of site history research, including environmental information, are provided in our August 2014 report.

Regulatory Setting

The site does not appear to be an "establishment" (nor would we anticipate it to be given that it is not being transferred). As such, the Connecticut Department of Energy and Environmental Protection (CTDEEP) Remedial Standard Regulations (RSRs) were used as guidance in evaluating site environmental conditions.

In consideration of regulatory requirements and site history, results of chemical analysis conducted as part of the soil precharacterization program were compared to CTDEEP RSRs. The RSR criteria used in our evaluation were the Residential Direct Exposure Criteria (RDEC) and the GA Pollutant Mobility Criteria (PMC). RDEC are used to evaluate the risks associated with human exposure to impacted soils. PMC are used to evaluate the potential for contaminants to leach from soil into groundwater. Groundwater at the site is classified by the CTDEEP as "GA". Groundwater designated as GA is considered an existing private and potential public or private supply of water suitable for drinking without treatment. Additionally, the results were compared with Massachusetts (MA) Landfill Reuse Acceptance Criteria (Policy# COMM-97-001) and Tire Pond Landfill Reuse Criteria to determine the suitability of reusing excavated site soils as cover at Massachusetts landfills or at Tire Pond Landfill as is standard industry practice.

RSR criteria allows for on-site reuse of excavated material. Standard CTDEEP guidance is that contaminated soil (i.e., soil exceeding RDEC criteria) should be placed either below a structure, below a minimum of 4 ft. of clean fill in vegetated areas, or below 2 ft. of clean fill below 3 in. of bituminous concrete. These parameters can be modified subject to owner risk tolerance. In addition, contaminated soil should be placed above the water table and not in areas prone to erosion.

Depending on types and concentrations of compounds present, off-site reuse of contaminated soil/material could be at either a Connecticut facility such as the Tire Pond landfill in North Haven, a MA lined or unlined landfill, an asphalt batching facility, or another CTDEEP-approved location.

PRECHARACTERIZATION PROGRAM

Subsurface Explorations

A total of 14 test borings (B101 through B111, and B113 through B115) were drilled at the site by General Borings, Inc. between 21 and 26 November 2014. Boring B112 was inaccessible due to utility conflicts and a test pit was excavated instead (TP112.)

The borings were advanced to depths ranging between 6 and 26.4 ft. below ground surface at the approximate locations shown on the attached Figures 2 and 3. The borings were typically advanced with hollow-stem auger techniques and split spoon samplers. An exception is that the upper 10 ft. at B113 was advanced using vacuum drilling techniques due to concerns with potential underground utility conflicts. Soil samples were obtained from the upper 10 ft. using a hand auger as the borehole was advanced by vacuum drilling. Vacuum drilling was also attempted at B112, but the borehole could not be advanced below a depth of 4 ft. after attempts at three different locations due to the presence of dense soils.

Test boring locations and ground surface elevations were surveyed by Manafort Brothers, Inc. Logs of test borings are attached.

Subsurface Conditions

Subsurface conditions encountered at the B100-series borings typically consist of fill overlying glaciofluvial deposits and/or glacial till, and are generally similar to those encountered at other borings at the site. The borings were terminated in fill, glaciofluvial soils, or glacial till, with borings B105, B106, and B109 terminating upon auger refusal on apparent bedrock. At those locations, the apparent top of bedrock was encountered at El. 579.1 to El. 581.4 (15.3 to 19.5 ft. below ground surface).

Refer to the attached test boring logs for detailed descriptions of subsurface conditions encountered at the borings.

Chemical Testing

Select soil samples were obtained from the test borings and test pit and chemically tested as part of this precharacterization program. Samples were screened using a photo-ionization detector (PID) for the relative presence of volatile organic compounds (VOCs). PID readings were not elevated above background.

Thirty-eight soil samples were collected from the building and site area (26 fill and 12 natural soil samples), and submitted to Complete Environmental Testing, Inc. (CET) of Stratford, Connecticut (a Connecticut state-certified laboratory) for laboratory chemical testing. Each sample was analyzed for one or more of the following as applicable:

- Volatile Organic Compounds (VOCs) by EPA Method 5035/8260;
- Semi-Volatile Organic Compounds (SVOCs) by EPA Method 8270;
- Polychlorinated Biphenyls (PCBs) by EPA Method 8082;
- Total RCRA 8 metals;
- Total Petroleum Hydrocarbons (CT Extractable Total Petroleum Hydrocarbons [ETPH] Method);
- Waste characteristic parameters (by Method SW 846) Reactive Sulfide and Cyanide, Conductivity, Flashpoint, and pH;

The results of the testing are summarized on Table I. This table typically includes only those compounds detected in at least one sample. Copies of the laboratory analytical data reports and chain-of-custody documentation for the chemical testing are provided in Appendix B. The results of testing performed during our preliminary precharacterization investigation are included in Table II.

Results of the chemical testing indicate elevated levels of certain compounds in some of the fill soils. The fill soils can be grouped into four re-use categories as outline below:

- Group I-1 Fill: These soils contain background levels of metals and are considered “clean.” Group I-2a Fill: These soils contain background levels of metals and levels of SVOCs that do not exceed RDEC and/or GA PMC. These soils are considered “polluted.”
- Group II-1 Fill: These soils contain SVOCs and/or CT ETPH at levels that exceed RDEC and/or GA PMC and are considered “contaminated.”
- Group II-3 Fill: These soils contain SVOCs at levels that exceed Massachusetts lined / unlined landfill criteria. These soils are considered “contaminated.”

The results of chemical testing indicate that natural soils are considered "clean" and only background levels of metals were detected. However, it should be noted that hydrocarbon odors were detected in natural soils at two borings drilled during explorations performed in February 2014 (included in our report dated 20 August 2014). A slight hydrocarbon odor was noted at boring B2 in a sample obtained at the top of glacial till. Although chemical testing was not performed on that sample, a similar odor was noted in overlying fill samples where elevated concentrations of volatile and/or semi-volatile compounds were detected by chemical laboratory testing. At boring B3, a hydrocarbon odor was noted in a sample of glacial till encountered at El. 574.5, which is likely below the anticipated depth of excavation. Contractors should anticipate that a portion of the natural soils may be considered polluted or contaminated.

The attached Figures 2 and 3 show the approximate limits of the soil groups discussed above at the proposed building and utility tunnel footprint. The figures also show the depths at which each soil group was encountered in the recent explorations. The limits shown are for planning purposes only, and actual conditions encountered in the field will vary. Refer to Appendix C for detailed definitions of Precharacterization Group Classifications. For planning purposes, precharacterization group classification of soils to be excavated for the site retaining wall to the west of the building and site regrading area to the east should be assumed based on results of chemical testing performed on samples obtained from nearby test borings. Additional sampling and analyses will likely be required to precharacterize soils to be excavated during other site work and utility installation.

MANAGEMENT OF EXCAVATED SOILS

Based on results of limited chemical testing performed during this investigation, soils to be excavated during construction are classified as shown below.

Group I-1 ("clean")

- Natural soils in all grids at the building and tunnel, and the fill soils in the B110 and B103 grids at the building at depths indicated on Figure 2. (Note: Hydrocarbon odors were noted in natural soils during the preliminary investigation as described above, and there is potential for polluted or contaminated natural soils to be encountered during excavation.)
- Fill and natural soils excavated from retaining wall areas near B114 and B115.
- Fill soils excavated from the area of B102 for installation of utilities.

Group I-2a ("polluted")

- Fill soils within grids B101, B104, B105, B107, and B113 at the building or utility tunnel at the depths indicated on Figure 2. These fill and natural soils are considered unrestricted relative to on-site reuse. The recent standard operating procedure for the University has been to transport soils in Group I-2a to a landfill unless these soils can be reused on-site.

Group II-1 ("contaminated")

- Fill soils within grids B104, B106, B107, B108, B109, B111, B112, and B113 at the building and tunnel at the depths shown on Figure 3 are considered "contaminated" and should be transported to a landfill for reuse.

Group II-3 ("contaminated")

- Fill soils within grid B101 at the building at the depths shown on Figure 3 are considered "contaminated" and should be transported to an appropriate facility (i.e. asphalt batching) for reuse.

For planning and pricing purposes, the contractor should assume that excess excavated soils that are not classified as Group I-1 and cannot be reused on-site must be transported to an unlined or lined landfill for reuse as daily or intermediate cover or as pre-cap contouring material. An exception to this is that soils classified as Group II-3 contain concentrations of compounds exceeding the landfill criteria referenced on Table I and should be transported to a state-licensed facility permitted to accept these materials, such as an asphalt batching facility.

The information and chemical test data contained in this report should be used by the contractor and/or its subcontractors to manage excavated soils and arrange for off-site disposition of excess excavated soils. Actual limits and quantities of excavated materials will vary based on actual conditions encountered during mass excavation, the contractor's approach to the excavation (i.e., the use of open cut or temporary excavation support systems), the actual limits of backfill placed during previous building demolition, the contractor's ability to reuse excavated soils, observations made by the environmental professional monitoring excavation, and other factors. On-site monitoring of the contractor's excavation activities by Haley & Aldrich are recommended to confirm the vertical and lateral limits of the various soil group classifications.

This report provides data and represents the chemical properties of the soil retrieved from explorations conducted for this project. Physical properties of the materials are noted on the test boring logs in Appendix B. However, the logs document observations and conditions encountered at the specific exploration locations, and may not be representative of the bulk soil requiring management. The contractor needs to understand the physical acceptance criteria for each facility and is responsible for the material meeting that respective facility's criteria (e.g., screening excavated soils to remove oversized materials such as demolition debris as required by the facility).

Permits

<u>Soil</u>

State and local permits may be required in the event that certain activities occur on-site including the following:

- Municipalities may require special permits for proposed construction activities. Some municipalities require special permits for stockpiling and/or earthwork activities. We do not anticipate such a permit will be required for this project.

- If greater than 1,000 cubic yards of contaminated soil is stockpiled on site for over 45 days or if any volume of contaminated soil is stockpiled for any time period off-site, then registration for a CTDEEP General Permit for Contaminated Soil and/or Sediment Management (Staging and Transfer) will be required.

- Solid waste materials were not encountered in the test borings in significant quantities. However, if encountered in large quantities during excavation, it may be necessary to obtain an Authorization for Landfill Disruption from the CTDEEP for managing and disposing of solid waste. We do not anticipate such a permit will be required for this project.

Groundwater

Based on the preliminary groundwater quality data and since the anticipated total disturbed area of the site will likely be greater than one acre, a temporary construction dewatering permit may be required in compliance with the State of Connecticut General Permit for the Discharge of Stormwater and Dewatering Wastewaters from Construction Activities (DEEP-WPED-GP-015). The project is considered "locally exempt", meaning the project is authorized under municipal, state, or federal authority, and may not be required to obtain municipal approval for the work. Among other things, a "locally exempt" project is required to submit a registration 60 days prior to the commencement of the construction activity and submit a Stormwater Pollution Control Plan (SWPCP) in conjunction with applying for the General Permit.

Based on the preliminary groundwater quality data which indicate that the groundwater is clean, discharge from temporary construction dewatering systems and from permanent foundation drainage systems may be routed to storm drains or sanitary sewers without the need for permitting beyond the previously noted Discharge of Stormwater and Dewatering Wastewaters from Construction Activities Permit.

Additional Chemical Testing

Disposal facilities or other suitable locations that can accept material require chemical testing to document the levels of contaminants and for comparison to their specific acceptance criteria. The frequency of testing is specified by the individual receiving facilities or determined by the facility operators, environmental professionals or CTDEEP regulators who are responsible for reviewing the data and determining the acceptability of the material. The frequency of testing in the precharacterization program assumed that excavated soils would be suitable for reuse at Massachusetts landfills as is standard industry practice, and was based on the estimated volumes of fill and natural soils anticipated to be excavated during construction as provided by Fusco Corporation.

Some additional testing may be required for soils requiring disposition at non-landfill facilities, asphalt batch facilities, treatment facilities, and RCRA landfills (if such soils were encountered during mass excavation). This testing is generally completed just prior to or during construction once the disposal facilities have been identified by the contractor. The frequency and test parameters required are a function of soil type (i.e., fill vs. natural soils), the volume of soil anticipated, previous site uses and known releases, and facility operating permit requirements.

At a minimum, it is anticipated that additional sampling and chemical analyses will be required to further characterize soils classified as Group II-3 for disposal. Facilities accepting such materials typically require a sampling frequency of one per 100 cu. yds. (versus 1 per 500 cu. yds. frequency during the precharacterization program). In addition, sampling near boring B112 (which couldn't be drilled due to utility conflicts) may also be required to obtain chemical test results considered by receiving facilities to be representative of that area, in lieu of test results on samples from TP112

advanced adjacent to the gridded area shown on Figures 2 and 3. In addition, sampling and analysis will likely also be required for site work excavation and underground utilities.

The contractor should coordinate additional testing with Haley & Aldrich. The times required for additional sampling, laboratory testing, and data review should be coordinated and considered in project sequence and schedule. In some cases, a comprehensive review is required to investigate the suitability of receiving facilities such as certain components of a Phase I Environmental Site Assessment or a facility environmental compliance audit.

LIMITATIONS

The conclusions provided in this report are based solely on the scope of work conducted and the sources of information discussed in this report. Additional information that becomes available concerning this site should be provided to Haley & Aldrich so that our conclusions and recommendations can be reviewed and modified if necessary. The work performed by Haley & Aldrich is subject to the terms and conditions stated in our proposal. This work has been undertaken in accordance with generally accepted environmental consulting and engineering practices.

CLOSURE

We appreciate the opportunity to provide these precharacterization services on this project. Please contact us if you have any questions or need additional information at this time.

Sincerely yours,
HALEY & ALDRICH, INC.

NOTES:
1. This table typically includes only those compounds detected on the dates indicated.
2. CTDEEP RSRs refers to the Connecticut Department of Energy & Environmental Protection (CTDEEP) Remediation Standard Regulations (RSR).
3. RSR criteria are listed in the same units as the analyte test result reported.
4. NI means not ignitable. NR means not reactive.
5. ND(0.01) means that the compound was not detected above laboratory detection limit. The number in parentheses is the detection limit.
6. - means not applicable or not analyzed.
7. ug/kg means micrograms per kilogram (ppb), mg/kg means milligrams per kilogram (ppm), mg/l means milligrams per liter.
7. Orange and bolded cells indicate concentration exceeds CT RSR Industrial / Commercial Direct Exposure Critiria (I/C DEC). I/C DEC takes precedence over GB
8. Blue and bolded cells indicate concentration exceeds CT RSR GB PMC.
9. Red and bolded cells indicate concentrtion exceeds MA Landfill criteria. This takes precedence over I/C DEC.

NOTES:
1. This table typically includes only those compounds detected on the dates indicated.
2. CTDEEP RSRs refers to the Connecticut Department of Energy & Environmental Protection (CTDEEP) Remediation Standard Regulations (RSR).
3. RSR criteria are listed in the same units as the analyte test result reported.
4. NI means not ignitable. NR means not reactive.
5. ND(0.01) means that the compound was not detected above laboratory detection limit. The number in parentheses is the detection limit.
6. - means not applicable or not analyzed.
7. ug/kg means micrograms per kilogram (ppb), mg/kg means milligrams per kilogram (ppm), mg/l means milligrams per liter.
7. Orange and bolded cells indicate concentration exceeds CT RSR Industrial / Commercial Direct Exposure Critiria (I/C DEC). I/C DEC takes precedence over GB
8. Blue and bolded cells indicate concentration exceeds CT RSR GB PMC.
9. Red and bolded cells indicate concentrtion exceeds MA Landfill criteria. This takes precedence over I/C DEC.

NOTES:
1. This table typically includes only those compounds detected on the dates indicated.
2. CTDEEP RSRs refers to the Connecticut Department of Energy & Environmental Protection (CTDEEP) Remediation Standard Regulations (RSR).
3. RSR criteria are listed in the same units as the analyte test result reported.
4. NI means not ignitable. NR means not reactive.
5. ND(0.01) means that the compound was not detected above laboratory detection limit. The number in parentheses is the detection limit.
6. - means not applicable or not analyzed.
7. ug/kg means micrograms per kilogram (ppb), mg/kg means milligrams per kilogram (ppm), mg/l means milligrams per liter.

B1 — DESIGNATION AND APPROXIMATE LOCATION OF TEST BORING DRILLED FOR HALEY & ALDRICH BY GENERAL BORINGS, INC., BETWEEN 4 AND 10 FEBRUARY 2014.

B101 — DESIGNATION AND APPROXIMATE LOCATION OF TEST BORING DRILLED FOR HALEY & ALDRICH BY GENERAL BORINGS, INC., BETWEEN 21 AND 26 NOVEMBER 2014.

TP112 — DESIGNATION AND APPROXIMATE LOCATION OF TEST PIT EXCAVATED BY ALL-PHASE ENTERPRISES, INC., ON 25 NOVEMBER 2014.

APPROXIMATE LIMITS OF PROPOSED BUILDING.

APPROXIMATE LIMITS OF SOIL PRECHARACTERIZATION GRID

I-1 FILL: NO CONTAMINANTS DETECTED ABOVE BACKGROUND LEVELS,

I-2a FILL: CONTAMINANT CONCENTRATIONS DO NOT EXCEED RDEC AND GAPMC.

II-1: CONTAMINANT CONCENTRATIONS EXCEED RDEC AND/OR GAPMC,

II-3: CONTAMINANT CONCENTRATIONS EXCEED RDEC AND/OR GAPMC AND MASSACHUSETTS LANDFILL CRITERIA.

3 TO 7 — NUMBERS IN PRECHARACTERIZATION GRID INDICATE APPROXIMATE THICKNESS OF SOIL LAYER IN FEET

NOTES:

1. BASEPLAN IS AUTOCAD FILE ACAD-70041-BASE.dwg PREPARED BY ALFRED BENESCH AND COMPANY, GLASTONBURY, CONNECTICUT.
2. PROPOSED BUILDING AND SITE LAYOUT TAKEN FROM DRAWING C301 "GRADING AND DRAINAGE PLAN," DATED 20 NOVEMBER 2014.
3. SOIL PRECHARACTERIZATION GRIDS REPRESENT APPROXIMATE LIMITS AND DEPTHS OF POLLUTED AND/OR CONTAMINATED SOIL. ACTUAL LIMITS AND DEPTHS WILL VARY.
4. REFER TO REPORT FOR ADDITIONAL INFORMATION FOR ON OR OFF-SITE REUSE OF NATURAL SOILS AND REUSE OF FILL SOILS NEAR LOCATIONS B102, B114, AND B115.
5. ELEVATIONS ARE IN FEET AND REFERENCE NAVD 88.

TEST BORING REPORT

Boring No. B101

Project	New Engineering & Science Building University of Connecticut, Storrs, CT
Client	Mitchell/Giurgola Architects, LLP
Contractor	General Borings, Inc.

File No.	36190-003
Sheet No.	1 of 1
Start	November 25, 2014
Finish	November 25, 2014
Driller	J. Wyant
H&A Rep.	K. Perez Mejia
Elevation	605.0
Datum	NGVD 29
Location	See Plan

	Casing	Sampler	Barrel	Drilling Equipment and Procedures
Type	HSA	S	-	Rig Make & Model: Truck-mounted Mobile Drill B-53
Inside Diameter (in.)	3.25	1 3/8	-	Bit Type: Cutting Head Drill Mud: None
Hammer Weight (lb)	-	140	-	Casing: Spun
Hammer Fall (in.)	-	30	-	Hoist/Hammer: Winch Safety Hammer PID Make & Model: None

Depth (ft)	Sampler Blows per 6 in.	Sample No. & Rec. (in.)	Sample Depth (ft)	Stratum Change Elev/Depth (ft)	USCS Symbol	VISUAL-MANUAL IDENTIFICATION AND DESCRIPTION (Density/consistency, color, GROUP NAME, max. particle size*, structure, odor, moisture, optional descriptions GEOLOGIC INTERPRETATION)	PID Readings (ppm) (sample/bkgd)
0	4 8 21 40	S1 6	0.0 2.0			Dense brown gravelly fine SAND, some asphalt, trace brick, slight organic odor, dry	ND
						Note: Advanced HSA from 2.0 to 3.0 ft through cobbles.	
	7 11 7 5	S2 7	3.0 5.0			Medium dense gray silty fine SAND, trace gravel, slight organic odor, dry	ND
5	5 4 2 2	S3 20	5.0 7.0			Loose brown silty medium to fine SAND, little gravel, no odor, moist	ND
	1 1 1 3	S4 8	7.0 9.0			Similar to S3, except very loose, trace gravel	ND
				596.0 9.0		-FILL-	
	20 50/3"	S5 9	9.0 9.8	595.2 9.8		Very dense brown to orange-brown silty medium to fine SAND, little gravel, no odor, dry -GLACIOFLUVIAL DEPOSITS-	ND
						BOTTOM OF EXPLORATION AT 9.8 FT	

Water Level Data

TEST BORING REPORT

Boring No. B114

Project	New Engineering & Science Building University of Connecticut, Storrs, CT
Client	Mitchell/Giurgola Architects, LLP
Contractor	General Borings, Inc.

File No.	36190-003
Sheet No.	1 of 1
Start	November 21, 2014
Finish	November 21, 2014
Driller	J. Wyant
H&A Rep.	K. Perez Mejia
Elevation	593.2
Datum	NGVD 29
Location	See Plan

	Casing	Sampler	Barrel	Drilling Equipment and Procedures
Type	HSA	S	-	Rig Make & Model: Truck-mounted Mobile Drill B-53
Inside Diameter (in.)	3.25	1 3/8	-	Bit Type: Cutting Head Drill Mud: None
Hammer Weight (lb)	-	140	-	Casing: Spun
Hammer Fall (in.)	-	30	-	Hoist/Hammer: Winch Safety Hammer PID Make & Model: None

Depth (ft)	Sampler Blows per 6 in.	Sample No. & Rec. (in.)	Sample Depth (ft)	Stratum Change Elev/Depth (ft)	USCS Symbol	VISUAL-MANUAL IDENTIFICATION AND DESCRIPTION (Density/consistency, color, GROUP NAME, max. particle size*, structure, odor, moisture, optional descriptions GEOLOGIC INTERPRETATION)	PID Readings (ppm) (sample/bkgd)
0				592.9 / 0.3		-BITUMINOUS CONCRETE-	
				592.7 / 0.5		-SUB BASE-	
				592.3 / 0.9		-BITUMINOUS CONCRETE-	
	20 19 10 11	S1 10	1.5 3.5			Medium dense brown gravelly fine SAND, trace silt, no odor, dry	ND
	15 8 5 6	S2 16	3.5 5.5			Medium dense brown to dark brown medium to fine SAND, little gravel, little silt, no odor, dry	ND
5	4 5 14 12	S3 20	5.5 7.5			Similar to above, except loose	ND
				586.7 / 6.5		-FILL-	
						Medium dense orange-brown to gray coarse to fine SAND, some gravel, trace silt, no odor, dry	ND
	15 30 35 38	S4 20	7.5 9.5			Similar to above, except very dense	ND
10	10 21 21 28	S5 22	10.0 12.0			Dense orange-brown fine SAND, trace silt, no odor, dry	ND
				581.2 / 12.0		-GLACIOFLUVIAL DEPOSITS-	
						BOTTOM OF EXPLORATION AT 12.0 FT	

Water Level Data					
Date	Time	Elapsed Time (hr.)	Depth (ft) to: Bottom of Casing	Bottom of Hole	Water

Sample ID
- O - Open End Rod
- T - Thin Wall Tube
- U - Undisturbed Sample
- S - Split Spoon Sample

Well Diagram
- Riser Pipe
- Screen
- Filter Sand
- Cuttings
- Grout
- Concrete
- Bentonite Seal

Summary

Overburden (ft)	12.0
Rock Cored (ft)	0
Samples	5S

Boring No. B114

Field Tests: **Dilatancy**: R - Rapid S - Slow N - None **Plasticity**: N - Nonplastic L - Low M - Medium H - High
Toughness: L - Low M - Medium H - High **Dry Strength**: N - None L - Low M - Medium H - High V - Very High

***Note: Maximum particle size is determined by direct observation within the limitations of sampler size.**

Note: Soil identification based on visual-manual methods of the USCS as practiced by Haley & Aldrich, Inc.

Analytical Report

CET# 4110617

Report Date: December 04, 2014
Project: 36190-003
PO Number: 36190-003

Connecticut Laboratory Certificate: PH 0116
Massachussetts laboratory Certificate.: M-CT903

New York Certification: 11982
Rhode Island Certification: 199

SAMPLE SUMMARY

The sample(s) were received at 3.1°C.

This report contains analytical data associated with following samples only.

Sample ID	Laboratory ID	Matrix	Collection Date/Time	Receipt Date
B110-F1 (0-4)	4110617-01	Soil	11/21/2014 9:30	11/25/2014

Questions related to this report should be directed to David Ditta, Timothy Fusco, or Robert Blake at 203-377-9984.

Sincerely,

David Ditta
Laboratory Director

Report Comments:

Sample Result Flags:
E- The result is estimated, above the calibration range.
H- The surrogate recovery is above the control limits.
L- The surrogate recovery is below the control limits.
B- The compound was detected in the laboratory blank.
P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
D- The RPD between the sample and the sample duplicate is high. Sample Homogenity may be a problem.
+- The Surrogate was diluted out.
*C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
*C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
*F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
*F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at the specified detection limit
All analyses were performed in house unless a Reference Laboratory is listed.
Samples will be disposed of 30 days after the report date.

Quality Control Definitions and Abbreviations

Internal Standard (IS)	An Analyte added to each sample or sample extract. An internal standard is used to monitor retention time, calculate relative response, and quantify analytes of interest.
Surrogate Recovery	The % recovery for non-tarer organic compounds that are spiked into all samples. Used to determine method performance.
Continuing Calibration	An analytical standard analyzed with each set of samples to verify initial calibration of the system.
Batch	Samples that are analyzed together with the same method, sequence and lot of reagents within the same time period.
ND	Not detected
RL	Reporting Limit
Dilution	Multiplier added to detection levels (MDL) and/or sample results due to interferences and/or high concentration of target compounds.
Duplicate	Result from the duplicate analysis of a sample.
Result	Amount of analyte found in a sample.
Spike Level	Amount of analyte added to a sample
Matrix Spike Result	Amount of analyte found including amount that was spiked.
Matrix Spike Dup	Amount of analyte foun in duplicate spikes including amount that was spike.
Matrix Spike % Recovery	% Recovery of spiked amount in sample.
Matrix Spike Dup % Recovery	% Recovery of spiked duplicate amount in sample.
RPD	Relative percent difference between Matrix Spike and Matrix Spike Duplicate.
Blank	Method Blank that has been taken through all steps of the analysis.
LCS % Recovery	Laboratory Control Sample percent recovery. The amount of analyte recovered from a fortified sample.
Recovery Limits	A range within which specified measurements results must fall to be compliant.
CC	Calibration Verification

Flags:

- H- Recovery is above the control limits
- L- Recovery is below the control limits
- B- Compound detected in the Blank
- P- RPD of dual column results exceeds 40%
- #- Sample result too high for accurate spike recovery.

Connecticut Laboratory Certification PH0116
Massachussets Laboratory Certification M-CT903

New York Certification 11982
Rhode Island Certification 199

REASONABLE CONFIDENCE PROTOCOL
LABORATORY ANALYSIS QA/QC CERTIFICATION FORM

Laboratory Name: Complete Environmental Testing, Inc.

Client: Haley & Aldrich

Project Location: 36190-003

Project Number:

Laboratory Sample ID(s):

4110617-01 thru 4110617-26

Sample Date(s):

11/21/2014,
11/24/2014

List RCP Methods Used:

CT-ETPH, EPA 6010C, EPA 7471B, EPA 8082A, EPA 8260C, EPA 8270D

CET #: 4110617

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CTDEP method-specific Reasonable Confidence Protocol documents?	☑ Yes ☐ No
1A	Were the method specified preservation and holding time requirements met?	☑ Yes ☐ No
1B	VPH and EPH Methods only: Was the VPH and EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	☐ Yes ☐ No ☑ N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	☑ Yes ☐ No
3	Were samples received at an appropriate temperature (< 6 degrees C.)?	☑ Yes ☐ No ☐ N/A
4	Were all QA/QC performance criteria specified in the CT DEP Reasonable Confidence Protocol documents achieved?	☐ Yes ☑ No
5a	a) Were reporting limits specified or referenced on the chain-of-custody?	☐ Yes ☑ No
5b	b) Were these reporting limits met?	☐ Yes ☐ No
6	For each analytical method referenced in this laboratory report package, were results reported for all consituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	☐ Yes ☑ No
7	Are project specific matrix spikes and laboratory duplicates included with this data set?	☑ Yes ☐ No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."
This form may not be altered and all questions must be answered.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete.

Authorized Signature: **Position:** **Laboratory Director**

Printed Name: **David Ditta** **Date:** **12/04/2014**

Name of Laboratory: **Complete Environmental Testing, Inc.**

This certification form is to be used for RCP methods only.

Analytical Report

CET# 4120016

Report Date: December 08, 2014
Project: UCONN Stem Dorm
PO Number: 36190-003

Connecticut Laboratory Certificate: PH 0116
Massachussetts laboratory Certificate.: M-CT903

New York Certification: 11982
Rhode Island Certification: 199

SAMPLE SUMMARY

The sample(s) were received at 3.5°C.

This report contains analytical data associated with following samples only.

Sample ID	Laboratory ID	Matrix	Collection Date/Time	Receipt Date
B-TP112-F1 0-5ft	4120016-01	Soil	11/25/2014 8:45	12/01/2014

Questions related to this report should be directed to David Ditta, Timothy Fusco, or Robert Blake at 203-377-9984.

Sincerely,

David Ditta
Laboratory Director

Report Comments:

Sample Result Flags:
E- The result is estimated, above the calibration range.
H- The surrogate recovery is above the control limits.
L- The surrogate recovery is below the control limits.
B- The compound was detected in the laboratory blank.
P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
D- The RPD between the sample and the sample duplicate is high. Sample Homogenity may be a problem.
+- The Surrogate was diluted out.
*C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
*C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
*F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
*F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at the specified detection limit
All analyses were performed in house unless a Reference Laboratory is listed.
Samples will be disposed of 30 days after the report date.

Quality Control Definitions and Abbreviations

Internal Standard (IS)	An Analyte added to each sample or sample extract. An internal standard is used to monitor retention time, calculate relative response, and quantify analytes of interest.
Surrogate Recovery	The % recovery for non-tarer organic compounds that are spiked into all samples. Used to determine method performance.
Continuing Calibration	An analytical standard analyzed with each set of samples to verify initial calibration of the system.
Batch	Samples that are analyzed together with the same method, sequence and lot of reagents within the same time period.
ND	Not detected
RL	Reporting Limit
Dilution	Multiplier added to detection levels (MDL) and/or sample results due to interferences and/or high concentration of target compounds.
Duplicate	Result from the duplicate analysis of a sample.
Result	Amount of analyte found in a sample.
Spike Level	Amount of analyte added to a sample
Matrix Spike Result	Amount of analyte found including amount that was spiked.
Matrix Spike Dup	Amount of analyte foun in duplicate spikes including amount that was spike.
Matrix Spike % Recovery	% Recovery of spiked amount in sample.
Matrix Spike Dup % Recovery	% Recovery of spiked duplicate amount in sample.
RPD	Relative percent difference between Matrix Spike and Matrix Spike Duplicate.
Blank	Method Blank that has been taken through all steps of the analysis.
LCS % Recovery	Laboratory Control Sample percent recovery. The amount of analyte recovered from a fortified sample.
Recovery Limits	A range within which specified measurements results must fall to be compliant.
CC	Calibration Verification

Flags:

- H- Recovery is above the control limits
- L- Recovery is below the control limits
- B- Compound detected in the Blank
- P- RPD of dual column results exceeds 40%
- #- Sample result too high for accurate spike recovery.

Connecticut Laboratory Certification PH0116
Massachussets Laboratory Certification M-CT903

New York Certification 11982
Rhode Island Certification 199

REASONABLE CONFIDENCE PROTOCOL
LABORATORY ANALYSIS QA/QC CERTIFICATION FORM

Laboratory Name: Complete Environmental Testing, Inc.

Client: Haley & Aldrich

Project Location: UCONN Stem Dorm

Project Number:

Laboratory Sample ID(s):
4120016-01 thru 4120016-06

Sample Date(s):
11/25/2014

List RCP Methods Used:
CT-ETPH, EPA 6010C, EPA 7471B, EPA 8082A, EPA 8260C, EPA 8270D

CET #: 4120016

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CTDEP method-specific Reasonable Confidence Protocol documents?	☑ Yes ☐ No
1A	Were the method specified preservation and holding time requirements met?	☑ Yes ☐ No
1B	VPH and EPH Methods only: Was the VPH and EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	☐ Yes ☐ No ☑ N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	☑ Yes ☐ No
3	Were samples received at an appropriate temperature (< 6 degrees C.)?	☑ Yes ☐ No ☐ N/A
4	Were all QA/QC performance criteria specified in the CT DEP Reasonable Confidence Protocol documents achieved?	☐ Yes ☑ No
5a	a) Were reporting limits specified or referenced on the chain-of-custody?	☑ Yes ☐ No
5b	b) Were these reporting limits met?	☑ Yes ☐ No
6	For each analytical method referenced in this laboratory report package, were results reported for all consituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	☐ Yes ☑ No
7	Are project specific matrix spikes and laboratory duplicates included with this data set?	☑ Yes ☐ No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."
This form may not be altered and all questions must be answered.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete.

Authorized Signature: **Position: Laboratory Director**

Printed Name: David Ditta **Date: 12/08/2014**

Name of Laboratory: Complete Environmental Testing, Inc.

This certification form is to be used for RCP methods only.

RCP Case Narrative

4- See Exceptions Report Below

6- The client requested a subset of the RCP Metals list.

Questions related to this report should be directed to David Ditta, Timothy Fusco, or Robert Blake at 203-377-9984.

Sincerely,

David Ditta
Laboratory Director

Report Comments:

Sample Result Flags:
E- The result is estimated, above the calibration range.
H- The surrogate recovery is above the control limits.
L- The surrogate recovery is below the control limits.
B- The compound was detected in the laboratory blank.
P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
D- The RPD between the sample and the sample duplicate is high. Sample Homogenity may be a problem.
+- The Surrogate was diluted out.
*C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
*C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
*F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
*F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at the specified detection limit
All analyses were performed in house unless a Reference Laboratory is listed.
Samples will be disposed of 30 days after the report date.

Quality Control Definitions and Abbreviations

Internal Standard (IS)	An Analyte added to each sample or sample extract. An internal standard is used to monitor retention time, calculate relative response, and quantify analytes of interest.
Surrogate Recovery	The % recovery for non-tarer organic compounds that are spiked into all samples. Used to determine method performance.
Continuing Calibration	An analytical standard analyzed with each set of samples to verify initial calibration of the system.
Batch	Samples that are analyzed together with the same method, sequence and lot of reagents within the same time period.
ND	Not detected
RL	Reporting Limit
Dilution	Multiplier added to detection levels (MDL) and/or sample results due to interferences and/or high concentration of target compounds.
Duplicate	Result from the duplicate analysis of a sample.
Result	Amount of analyte found in a sample.
Spike Level	Amount of analyte added to a sample
Matrix Spike Result	Amount of analyte found including amount that was spiked.
Matrix Spike Dup	Amount of analyte foun in duplicate spikes including amount that was spike.
Matrix Spike % Recovery	% Recovery of spiked amount in sample.
Matrix Spike Dup % Recovery	% Recovery of spiked duplicate amount in sample.
RPD	Relative percent difference between Matrix Spike and Matrix Spike Duplicate.
Blank	Method Blank that has been taken through all steps of the analysis.
LCS % Recovery	Laboratory Control Sample percent recovery. The amount of analyte recovered from a fortified sample.
Recovery Limits	A range within which specified measurements results must fall to be compliant.
CC	Calibration Verification

Flags:

- H- Recovery is above the control limits
- L- Recovery is below the control limits
- B- Compound detected in the Blank
- P- RPD of dual column results exceeds 40%
- #- Sample result too high for accurate spike recovery.

Connecticut Laboratory Certification PH0116
Massachussets Laboratory Certification M-CT903

New York Certification 11982
Rhode Island Certification 199

REASONABLE CONFIDENCE PROTOCOL
LABORATORY ANALYSIS QA/QC CERTIFICATION FORM

Laboratory Name: Complete Environmental Testing, Inc.

Client: Haley & Aldrich

Project Location: UCONN Stem Dorm

Project Number: 36190-003

Laboratory Sample ID(s):

4120017-01 thru 4120017-06

Sample Date(s):

11/25/2014,
11/26/2014

List RCP Methods Used:

CT-ETPH, EPA 6010C, EPA 7471B, EPA 8082A, EPA 8260C, EPA 8270D

CET #: 4120017

1	For each analytical method referenced in this laboratory report package, were all specified QA/QC performance criteria followed, including the requirement to explain any criteria falling outside of acceptable guidelines, as specified in the CTDEP method-specific Reasonable Confidence Protocol documents?	☑ Yes ☐ No
1A	Were the method specified preservation and holding time requirements met?	☑ Yes ☐ No
1B	VPH and EPH Methods only: Was the VPH and EPH method conducted without significant modifications (see Section 11.3 of respective RCP methods)?	☐ Yes ☐ No ☑ N/A
2	Were all samples received by the laboratory in a condition consistent with that described on the associated chain-of-custody document(s)?	☑ Yes ☐ No
3	Were samples received at an appropriate temperature (< 6 degrees C.)?	☑ Yes ☐ No ☐ N/A
4	Were all QA/QC performance criteria specified in the CT DEP Reasonable Confidence Protocol documents achieved?	☐ Yes ☑ No
5a	a) Were reporting limits specified or referenced on the chain-of-custody?	☐ Yes ☑ No
5b	b) Were these reporting limits met?	☐ Yes ☐ No
6	For each analytical method referenced in this laboratory report package, were results reported for all consituents identified in the method-specific analyte lists presented in the Reasonable Confidence Protocol documents?	☐ Yes ☑ No
7	Are project specific matrix spikes and laboratory duplicates included with this data set?	☑ Yes ☐ No

Notes: For all questions to which the response was "No" (with the exception of question #7), additional information must be provided in an attached narrative. If the answer to question #1, #1A, or #1B is "No", the data package does not meet the requirements for "Reasonable Confidence."
This form may not be altered and all questions must be answered.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete.

Authorized Signature: **Position:** **Laboratory Director**

Printed Name: **David Ditta** **Date:** **12/08/2014**

Name of Laboratory: **Complete Environmental Testing, Inc.**

This certification form is to be used for RCP methods only.

Analytical Report
CET# 4120208

Report Date: December 16, 2014
Project: UCONN Stem Dorm
PO Number: 36190-003

Connecticut Laboratory Certificate: PH 0116
Massachussetts laboratory Certificate.: M-CT903

New York Certification: 11982
Rhode Island Certification: 199

SAMPLE SUMMARY

The sample(s) were received at 3.5°C.

This report contains analytical data associated with following samples only.

Sample ID	Laboratory ID	Matrix	Collection Date/Time	Receipt Date
B-TP112-F2 5-10ft	4120208-01	Soil	11/25/2014 9:00	12/01/2014

Analyte: TCLP Lead [EPA 6020A] **Analyst: SS**

Prep: EPA 3005A-1311 **Matrix: Extract**

Laboratory ID	Client Sample ID	Result	RL	Units	Dilution	Batch	Prepared	Date/Time Analyzed	Notes
4120208-01	B-TP112-F2 5-10ft	**0.92**	0.013	mg/L	1	B4L1303	12/13/2014	12/15/2014 15:16	

Questions related to this report should be directed to David Ditta, Timothy Fusco, or Robert Blake at 203-377-9984.

Sincerely,

David Ditta
Laboratory Director

Report Comments:

Sample Result Flags:
E- The result is estimated, above the calibration range.
H- The surrogate recovery is above the control limits.
L- The surrogate recovery is below the control limits.
B- The compound was detected in the laboratory blank.
P- The Relative Percent Difference (RPD) of dual column analyses exceeds 40%.
D- The RPD between the sample and the sample duplicate is high. Sample Homogenity may be a problem.
+- The Surrogate was diluted out.
*C1- The Continuing Calibration did not meet method specifications and was biased low for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased low.
*C2- The Continuing Calibration did not meet method specifications and was biased high for this analyte. Increased uncertainty is associated with the reported value which is likely to be biased high.
*F1- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the low side.
*F2- The Laboratory Control Sample recovery is outside of control limits. Reported value for this analyte is likely to be biased on the high side.
I- The Analyte exceeds %RSD limits for the Initial Calibration. This is a non-directional bias.

All results met standard operating procedures unless indicated by a data qualifier next to a sample result, or a narration in the QC report.

Complete Environmental Testing is only responsible for the certified testing and is not directly responsible for the integrity of the sample before laboratory receipt.

ND is None Detected at the specified detection limit
All analyses were performed in house unless a Reference Laboratory is listed.
Samples will be disposed of 30 days after the report date.

APPENDIX C

Precharacterization Group Classifications

APPENDIX C
Precharacterization Group Classification

Haley & Aldrich has developed the following Soil Precharacterization Group Classification System to describe soil Quality with regards to both the Remediation Standard Regulations and disposal facility requirements (COMM-97-001 and specific facility requirements):

HALEY & ALDRICH
SOIL PRECHARACTERIZATION
GROUP CLASSIFICATION SYSTEM

1. Group I:

   a. Group I-1: Naturally-deposited soils or fill soils that contain no detectable substances other than metals at or below background conditions typical for natural soils, and meet the CTDEP Residential Direct Exposure Criteria (RDEC), Pollutant Mobility Criteria (PMC) for areas with groundwater classified "GA" by the CTDEP (GA-PMC), and Residential Soil Vapor Criteria (RSVC). Reuse of these soils may be acceptable at on-site or off-site locations, subject to review and approval by the Owner and Environmental Consultant. Alternately, these soils may be reused as daily cover, intermediate cover, or pre-cap contouring material at Connecticut or Massachusetts landfills provided the soils meet facility-specific acceptance criteria.

   b. Group I-2a: Naturally-deposited soils (Polluted Soils) or artificially-deposited fill (Polluted Fill) that contain substances at concentrations above laboratory detection limits but below CTDEP RDEC, GA-PMC, RSVC, and that are not otherwise a hazardous waste, as specified in CTDEP Regulations. Reuse of these soils may be acceptable at on-site or off-site locations, subject to review and approval by the Owner and Environmental Consultant. Alternately, these soils may be reused as daily cover, intermediate cover, or pre-cap contouring material at Connecticut or Massachusetts landfills provided the soils meet facility-specific acceptance criteria. A Connecticut Special Waste Authorization may be required for off-site reuse of these soils.

   c. Group I-2b: Naturally-deposited soils (Polluted Soils) or artificially-deposited fill (Polluted Fill) that contain substances at concentrations above laboratory detection limits but below CTDEP RDEC, GB-PMC, RSVC, and that are not otherwise a hazardous waste, as specified in CTDEP Regulations. Reuse of these soils may be acceptable at on-site or off-site locations classified as GB groundwater area, subject to review and approval by the Owner and Environmental Consultant. Alternately, these soils may be reused as daily cover, intermediate cover, or pre-cap contouring material at Connecticut or Massachusetts landfills provided the soils meet facility-specific acceptance criteria. A Connecticut Special Waste Authorization may be required for off-site reuse of these soils.

   d. Group I-3: Naturally-deposited soils (Polluted Soils) or artificially-deposited fill (Polluted Fill) that contain substances at concentrations above laboratory detection limits but below CTDEP RDEC and RSVC, above GB-PMC, and that are not otherwise a hazardous waste, as specified in CTDEP Regulations. For bidding

purposes, the Contractor shall assume these soils will be transported to a Connecticut or Massachusetts landfill provided the soils meet facility-specific acceptance criteria. Alternately, reuse of these soils may be acceptable at on-site or off-site locations, subject to review and approval by the Owner and Environmental Consultant. A Connecticut Special Waste Authorization may be required for off-site reuse of these soils.

e. Transport of Group I soils from the site to appropriate off-site facilities located in Connecticut shall be tracked using a trucking manifest acceptable to the Owner and prepared by the Environmental Consultant.

f. Transport of Group I soils from the site to appropriate off-site facilities located in Massachusetts shall be tracked using MADEP Material Shipping Record & Log, which will be prepared by the Environmental Consultant.

2. Group II: Soils that contain substances at concentrations above the applicable RDEC. Unless otherwise specified, transport of Group II soils from the site to Massachusetts receiving facilities shall be tracked using a Massachusetts Department of Environmental Protection (MADEP) Bureau of Waste Site Cleanup Material Shipping Record prepared by the Environmental Consultant. For materials transported to receiving facilities in states other than Massachusetts, material shall be tracked using a trucking manifest acceptable to the Owner and Environmental Consultant. A Connecticut Special Waste Authorization may be required for off-site reuse of these soils.

   a. Group II-1: Soils that meet all applicable criteria (i.e., COMM-97-001 and/or facility-specific permit requirements) for reuse as daily cover, intermediate cover, or pre-cap contouring material at Massachusetts unlined landfills. Group II-1 soils may require management under the RSRs unless specifically indicated otherwise by the Owner or Environmental Consultant. Alternately, these soils may be disposed or reused as daily cover, intermediate cover, or pre-cap contouring material at Connecticut landfills, provided the soils meet facility-specific acceptance criteria.

   b. Group II-2: Soils that meet all applicable criteria (i.e., COMM-97-001 and/or facility-specific permit requirements) for reuse as daily cover, intermediate cover, or pre-cap contouring material at Massachusetts lined landfills. Group II-2 soils may require management under the RSRs unless specifically indicated otherwise by the Owner or Environmental Consultant. Alternately, these soils may be disposed or reused as daily cover, intermediate cover, or pre-cap contouring material at Connecticut landfills, provided the soils meet facility-specific acceptance criteria.

   c. Group II-3: Soils that exceed Massachusetts unlined and lined landfill criteria (i.e., COMM-97-001 and/or facility-specific permit requirements), but meet all applicable criteria for asphalt batching at the proposed facility, and are not classified as a RCRA Hazardous Waste.

   d. Group II-4: Soils that require removal to regional thermal treatment facilities or out-of-state recycling facilities, and are not classified as a RCRA Hazardous Waste.

e. Group II-5: Soils require removal to regional disposal facilities, and are not classified as a RCRA Hazardous Waste.

3. Group III (Hazardous Waste)

   a. Group III-1: Soils determined to contain "listed" or "characteristic" hazardous waste constituents that cannot be readily treated on-site. These soils must be transported to an approved out-of-state RCRA Subtitle C hazardous waste disposal or treatment facility under Uniform Hazardous Waste Manifest.

   b. Group III-2: Soils determined to contain "listed" or "characteristic" hazardous waste constituents that can be readily treated on-site to remove applicable leachable contaminant concentrations. Following treatment, the material will be reclassified depending on other contaminants and disposed of at a Group II-2, II-3, II-4, or II-5 facility, as applicable.

4. Group IV (Solid Waste): Debris such as paper, glass, wood, metal, timber piles, timber cribbing, steel sheeting, and miscellaneous rubble shall be disposed at CTDEP-approved solid waste landfills or processed and recycled if possible. Pursuant to CTDEP's Solid Waste Regulations, if greater than ten cubic yards of Solid Waste are disposed at a location, it constitutes a Solid Waste Disposal Area. If significant amounts of Solid Waste materials are encountered in excavated materials at the site, discussion with the CTDEP may be necessary to confirm the applicable requirements.
