1.0 INTRODUCTION

Diversified Technology Consultants, Inc. (DTC) was retained by the State of Connecticut Department of Transportation (ConnDOT) to conduct a Task 110 Corridor Land Use Evaluation in support of ConnDOT Project No. 0051-0260, Route 4 Improvements from Garden Street to Mountain Spring Road, in Farmington, Connecticut. The objective of this Corridor Land Use Evaluation is to assess the relative environmental risk associated with current and former land uses within the project corridor and vicinity, to evaluate whether project activities may encounter hazardous wastes, contaminated materials, or other regulated substances, and to evaluate whether further investigation of the project corridor is warranted.

1.1 Project Description

The project involves improving Route 4 from Garden Street to Mountain Spring Road, including intersections with Route 4 and Route 10 (Main Street/Waterville Road) and Route 4 and High Street. The project location is shown in Figure 1 (Corridor Location Map). The Farmington River is located directly to the west of the project corridor.

Based upon a review of preliminary construction plans and information provided by ConnDOT, it is anticipated that the project will impact 33 parcels, requiring at least seven partial property acquisitions. The project will involve new road construction, relocation/reconstruction of existing roadways, drainage improvements, utility relocations, and excavations in excess of three feet in depth.

As noted above, a total of 33 individual parcels of land are located within the project corridor. A unique Parcel I.D. number, assigned by DTC, identifies each parcel along with the property address and Map and Lot numbers provided by the Farmington Tax Assessor's Offices. The individual Parcel I.D. numbers are provided on Figure 2 and Table 1.

1.2 Scope of Services

The scope of this evaluation included the completion of the following tasks for the parcels located within the project corridor:

- completion of a "windshield" survey;
- review of available municipal land records provided by the Farmington Tax Assessor's Office;
- evaluation of current and historic land uses;
- review of readily available environmental records through the completion of an electronic search of federal and state environmental databases;
- review of the environmental setting of the project area;
- summary and tabulation of current and historic land use information; and
- a professional opinion regarding the relative environmental risk associated with each parcel and recommendations for further evaluation or investigation, as appropriate.

2.0 LAND USE EVALUATION

2.1 "Windshield" Site Survey

Christopher Koelle of DTC conducted a "windshield" survey of the project corridor on June 12, 2006. The survey involved obtaining information regarding the 33 subject parcels through inspection from public right-of-ways. Direct access to the parcels in the project corridor was not available. Due to this limitation, all potential areas of environmental concern within the project corridor may not have been identified.

Environmental observations are summarized by parcel in the following section. The Land Use Evaluation Sheets completed during the windshield survey are included as Appendix A. Photographs of the subject parcels are included as Appendix C.

2.2 Current and Historic Land Use

The current use of each of the parcels within the study corridor was evaluated based upon information gathered during the windshield survey and review of the Town of Farmington municipal land records. This section provides a description of the 33 parcels located within the project corridor.

Current land use within the corridor is mixed residential and commercial land. Figure 2 depicts the approximate locations and configurations of the parcels within the project corridor and Table 1 summarizes the current and available historic usage of the individual parcels. Please note that dates provided regarding current and historic land use are approximate and based on the sources listed below.

The historic use of the parcels within the project corridor was compiled from the following sources:

- City directories dated 1933, 1955, 1960, 1969, 1973, and 1979.
- Aerial photographs dated 1941 and 1951.
- Sanborn Fire Insurance Company maps dated 1924 and 1945.
- Available Tax Assessor's records from the Town of Farmington.

Canal Path

Parcel 1 – 1 & 2 Canal Path – Approximate 0.63 hectare (1.56 acre) parcel that contains two single story retail buildings. Building 1 (c.1950) is occupied by Franklin Jewelers and Building 2 (c.1940) is occupied by Farmington Frame Company. The heat source for the buildings is unknown. This parcel appears to have been vacant from 1924 through 1951.

Farmington Avenue

Parcel 2 – 729 Farmington Avenue – Approximate 2.36 hectare (5.82 acre) parcel occupied by a residence (c.1926), heated with oil. The western portion of the parcel is currently utilized as an orchard. This parcel appears to have been used for residential purposes from 1924 to the present.

Due to the current use of the parcel as an orchard, the potential exists for subsurface contamination.

Parcel 3 – 750 Farmington Avenue – Approximate 1.29 hectare (3.18 acre) vacant commercial parcel containing three vacant buildings (c.1955). The heat sources for the three buildings are unknown. The parcel was formerly occupied by Parsons Farmington Chevrolet. Building 1 was formerly occupied by a showroom, several service bays, and offices. Two underground storage tank (UST) concrete pads were observed directly to the east of Building 1.

Building 2, located to the west of the showroom, was observed to have a sign indicating "Parsons Paint Department". The Farmington Tax Assessor field card indicated that this building was used as a body shop. A groundwater monitoring well was observed south of Building 2, in close proximity to the roadway of Farmington Avenue.

Building 3 appears to have been utilized as a repair garage.

This parcel was residential in 1924 and then utilized as a car dealership/repair facility from approximately 1927 until the early 2000s.

Based on the historic use of the parcel, the potential exists for significant subsurface contamination as a result of multiple potential release areas.

Parcel 4 – 763 Farmington Avenue – Approximate 0.42 hectare (1.05 acre) parcel containing a two story commercial building (c.1955) utilized as office space for an insurance company, heat source unknown. This parcel was residential from approximately 1924 to 1933 and commercial office space from 1955 to the present.

Parcel 5 – 768 Farmington Avenue – Approximate 0.02 hectare (0.06 acre) parcel containing a two story commercial building (c.1950) utilized as office space, heated by oil. Fill and vent pipes for a basement above ground storage tank (AST) were observed. The parcel was historically occupied by a paint store from 1924 to 1945, a hardware store from 1955 to 1960, and offices from 1973 to 1979. The 1924 Sanborn Fire Insurance Map depicted an oil UST between the building and Farmington Avenue.

Based on the historic presence of an oil UST at the parcel, the potential exists for subsurface contamination.

Parcel 6 – 767-771 Farmington Avenue & 5-9 Brick Walk Lane – Approximate 0.65 hectare (1.57 acre) parcel containing six commercial buildings (c.1950-1956) utilized as retail stores and offices. Building 1 (767 Farmington Ave.) is occupied by Truffles Bakery. Building 2 (769 Farmington Ave.) contains a retail store. Building 3 (771 Farmington Ave.) is occupied by Wrights Liquors. A fill and vent pipe for a heating oil tank was observed adjacent to Building 3, however, it was not clear whether the fill and vent pipes were associated with a UST or a basement AST. Building 4 (9 Brick Walk Lane) is occupied by an antique store, Building 5 (7 Brick Walk Lane) is occupied by a hairdresser, and Building 6 contains an office. The heat sources for Buildings 1, 2, 4, 5, and 6 are unknown. A pad mounted electrical transformer was observed adjacent to Building 4. This parcel was residential from 1924 to 1945 and utilized for retail purposes from 1955 to the present.

Parcel 7 – 772 Farmington Avenue – Approximate 0.02 hectare (0.06 acre) parcel containing a 2.5 story commercial office building (c.1950), heat source unknown. This parcel was utilized as an upholsterer and fire department from 1924 to 1933, Luke's Cleaners and offices in 1955, and office space from 1960 to 1979. The 1924 Sanborn Fire Insurance Map indicates the presence of one oil UST and one gasoline UST along the southeast corner of the building.

Based on the historic presence of oil and gasoline USTs, the potential exists for subsurface contamination.

Parcel 8 – 774 Farmington Avenue – Approximate 0.08 hectare (0.19 acre) parcel that contains a two story residence (c.1810), heated with oil. This parcel has been residential since at least 1924.

Parcel 9 – 775 Farmington Avenue – Approximate 0.04 hectare (0.1 acre) parcel containing a one story commercial building (c.1950) utilized as a dentist office, heat source unknown. This parcel was vacant from 1924 to 1945 and occupied by a dentist office from 1955 to 2006.

Parcel 10 – 776 Farmington Avenue – Approximate 0.3 hectare (0.73 acre) parcel containing a two story residence (c.1800), heated with oil. Fill and vent pipes associated with a basement heating oil AST were observed. This parcel has been residential since at least 1924.

Parcel 11 – 778 Farmington Avenue – Approximate 0.15 hectare (0.36 acre) parcel containing a 2.5 story commercial building (c.1950), heated with oil, occupied by offices and a hairdresser. A heating oil AST was observed along the eastern exterior wall of the building. The heating oil AST did not have secondary containment and was observed to be rusted. This parcel was residential from 1924 to 1955 and commercial/residential from 1960 to 1979.

Parcel 12 – 780 Farmington Avenue – Approximate 0.06 hectare (0.15 acre) parcel containing a two story commercial building (c.1900), heat source unknown. The building is currently occupied by a photographer and used as office space. This parcel was residential from 1924 to 1945, occupied by a plumber from 1969 to 1973, and utilized by a photographer from 1979 to the present.

Based on the presence of a photographer at this parcel, the potential exists for subsurface contamination.

Parcel 13 – 781 Farmington Avenue – Approximate 0.34 hectare (0.85 acre) parcel containing a bank building (c.1970) occupied by Bank of America, heat source unknown. This parcel was residential in 1924, occupied by Farmington Garage (auto repairs and "platters") from 1946 to 1973, and utilized as a bank from 1979 to the present. The 1945 Sanborn Fire Insurance Map indicates that two gasoline USTs were formerly located near the northwestern corner of the existing building.

Based on the historic use of the parcel and the historic presence of two gasoline USTs, the potential exists for significant subsurface contamination as a result of multiple potential release areas.

Parcel 14 – 784-788 Farmington Avenue – Approximate 0.57 hectare (1.4 acre) parcel that contains two commercial buildings. Building 1 (784 Farmington Ave.) (c.1950) is occupied by offices and a retail unit. A fill pipe for a heating oil UST was observed south of Building 1. Building 2 (788 Farmington Ave.) (c.1960) is occupied by a restaurant, Chuck's Steakhouse, heat source unknown.

Building 1 was historically utilized as an eight car garage associated with the adjacent Elm Tree Inn from 1924 to 1945, commercial/retail from 1955 to 1979, and was occupied by Farmington Avenue Cleaners & Dryers in 1960. The vicinity of Building 2 was occupied by several small vehicle garages associated with the adjacent Elm Tree Inn from 1924 to 1945. Building 2 was constructed in 1960 and utilized as a restaurant from that time to the present. The 1924 and 1945 Sanborn Fire Insurance Maps indicate the presence of two gasoline USTs to the west of Building 1.

Based on the historic use of the parcel and the presence of at two historic gasoline USTs and one heating oil UST, the potential exists for significant subsurface contamination as a result of multiple potential release areas.

Parcel 15 – 790 Farmington Avenue – Approximate 0.98 hectare (2.42 acre) parcel containing three commercial office buildings (c.1976), heating sources unknown. This parcel was vacant woods/farmland from 1924 to 1973 and commercial office from 1979 to 2006.

Parcel 16 – 792 Farmington Avenue – Approximate 0.35 hectare (0.87 acre) parcel containing a residential apartment building (c.1880), heated with oil. A potential fill pipe for a heating oil UST was observed along the east side of the building. The building was utilized as the Elm Tree Inn from 1924 to 1955 and Elm Tree Apartments from 1969 to the present.

Parcel 17 – 8222 Farmington Avenue – Approximate 0.28 hectare (0.68 acre) parcel occupied by a park. This parcel has been utilized as a park from 1924 to the present.

Parcel 18 – 806 Farmington Avenue – Approximate 15.27 hectare (37.74 acre) parcel occupied by The Country Club of Farmington. This parcel is occupied by at least two buildings and an 18-hole golf course. The main building appears to be heated by natural gas. A pad mounted transformer was observed along the southern exterior wall of the main building. This parcel has been occupied by The Country Club of Farmington since at least 1924.

Parcel 19 – 819 Farmington Avenue – Approximate 0.09 hectare (0.22 acre) parcel containing a one story commercial building (c.1950), heated with natural gas, currently utilized as a restaurant. This parcel was part of a larger residential property from 1924 to 1945 and used as office/retail from 1955 to 1996.

Parcel 20 – 827 Farmington Avenue – Approximate 0.81 hectare (2.0 acre) parcel containing a large commercial building (c.1965), heated by natural gas. The portion of the building with frontage along Farmington Avenue is currently occupied by office/retail units and the rear portion is utilized as a 72 room inn. This parcel was residential from 1924 to 1945 and utilized as office space and an inn from 1955 to the present.

Parcel 21 – 838-850 Farmington Avenue – Approximate 1.02 hectare (2.53 acre) parcel containing two single story commercial buildings (c.1966). The heating sources for the buildings are unknown. Building 1 is occupied by Epicure Market (a small strip mall) and Building 2 is occupied by a bank. This parcel was residential from 1924 to 1945. No information was available for the parcel from 1955 to 1960. The parcel was utilized as a strip mall from 1973 to 1979, a portion of which was occupied by Farmington Avenue Cleaners & Dryers.

Based on the historic use of the parcel, it's potentially downgradient or cross gradient location to two gasoline stations, and its potentially downgradient or cross gradient location to a drycleaner, the potential exists for significant subsurface contamination.

Garden Street

Parcel 22 – 2-4 Garden Street – Approximate 0.09 hectare (0.22 acre) parcel that contains a two story commercial office building (c.1955), heated by oil. Fill and vent pipes for a basement heating oil AST were observed. This parcel was historically occupied by Southern New England Telephone Co. from 1924 to 1945 and was used as retail space from 1955 to 1979. The 1924 and

1945 Sanborn Fire Insurance Maps indicate the presence of a gasoline UST along the northwest corner of the existing building.

Due to the historic presence of a gasoline UST at the parcel, the potential exists for subsurface contamination.

High Street

Parcel 23 – 2 High Street – Approximate 0.2 hectare (0.49 acre) parcel occupied by two commercial buildings. Building 1 is occupied by a doctor's office and is heated with oil. Fill and vent pipes associated with a heating oil UST were observed along the north side of the building. Building 2 is occupied by Webster Bank, heat source unknown. This parcel was residential in 1945, a doctor's office in 1955, and miscellaneous offices from 1960 to 1973.

Due to the presence of a heating oil UST at the parcel, the potential exists for subsurface contamination.

Main Street

Parcel 24 – 4 Main Street – Approximate 0.19 hectare (0.48 acre) parcel occupied by a two story office building (c.1965), heated with natural gas. This parcel was retail from 1924 to 1979.

Parcel 25 – 10 Main Street – Approximate 0.09 hectare (0.22 acre) parcel occupied by a two story residence (c.1792), heated with oil. This parcel has been residential since at least 1924.

Parcel 26 – 11 Main Street – Approximate 0.13 hectare (0.32 acre) parcel occupied by an office building (c.1966), heated with oil. Fill and vent pipes, potentially associated with a heating oil UST, were observed along the north side of the building. This parcel was residential from 1924 to 1945 and retail/residential in 1955.

Norton Lane

Parcel 27 – 5 Norton Lane – This parcel is occupied by a residence (c.1920), heated with oil.

Parcel 28 – 3 Norton Lane – Approximate 0.15 hectare (0.37 acre) parcel occupied by a 1.5 story residence (c.1750), heated with oil.

Parcel 29 – 6-10 Norton Lane – Approximate 0.23 hectare (0.57 acre) parcel occupied by a residence (c.1821), heated with oil.

Waterville Road

Parcel 30 – 1 Waterville Road (a.k.a. 820 Farmington Avenue) – Approximate 0.27 hectare (0.67 acre) commercial parcel occupied by a two story office building (c.1950), heat source unknown. This parcel was residential from 1924 to 1945 and had an unknown use from 1955 to 1979.

Parcel 31 – 3 Waterville Road – Approximate 0.09 hectare (0.22 acre) commercial parcel occupied by a two story building (construction date unknown), heated with oil. Fill and vent pipes associated with a basement heating oil AST were observed. This parcel was residential from 1924 to 1945 and had an unknown use from 1955 to 1979.

Parcel 32 – 5 Waterville Road – Approximate 0.15 hectare (0.36 acre) parcel occupied by an office building (c.1950), heat source unknown. This parcel was residential from 1924 to 1945 and had an unknown use from 1955 to 1979.

Parcel 33 – 7 Waterville Road – Approximate 0.1 hectare (0.25 acre) parcel occupied by a 2.5 story residence (c.1875), heated with oil. This parcel has been residential since at least 1924.

3.0 ENVIRONMENTAL RECORDS REVIEW

DTC obtained an electronic environmental database search report from FirstSearch® Technology Corporation (FirstSearch) to identify parcels of environmental concern that may be located within the project corridor. A complete list of the state and federal databases that were searched, specific agency, and the dates of the respective databases are included in the FirstSearch report, which is included in Appendix B.

DTC reviewed the Connecticut Department of Environmental Protection (DEP) hazardous waste manifest database for years 1984 through 2003. DTC also reviewed the DEP Property Transfer Program database that lists Transfer Act Form filings made with the DEP through August 2005.

The following summarizes the results of the review of available environmental databases.

Parcel 2 – 729 Farmington Avenue

Site Name – Dunn Residence

- LUST – A leaking 2,000-gallon No. 2 fuel oil UST was reported to the DEP on May 25, 2001. The UST and contaminated soils were removed. The case is listed as closed.
- Spills – This site is listed as having had a release of fuel oil associated with the above leaking UST incident on March 25, 2001. The spill case is listed as closed.

Parcel 3 – 750 Farmington Avenue

Site Names – Parsons Robert E., Inc. and Parsons Chevrolet

- CERCLIS NFRAP – This site is listed as a CERCLIS site with no further remedial action planned (NFRAP).
- RCRA Generator – This site is listed as a Conditionally Exempt Small Quantity Generator of hazardous waste.
- Spills – Approximately 130 gallons of No. 2 fuel oil were released on April 27, 1999 when a UST was overfilled. The spill was contained and removed and the spill incident is listed as closed.
- State Site – Chlorinated volatile organic compounds (VOCs), semi-volatile organic compounds (semi-VOCs), and metals are reported to have been released at the site. Release mechanisms are listed as a drywell, USTs, and drums. Parsons is listed as having been in operation since 1927 in the FirstSearch Report.
- Registered USTs – This site is listed as having six USTs removed from the site. These USTs included: a 3,000-gallon gasoline tank installed in 1963, two 2,000-gallon gasoline tanks installed in 1963, a 1,000-gallon gasoline tank installed in 1963, and two 2,000-gallon waste oil tanks installed in the 1950s. Three USTs are listed as currently in use including: a 3,000-gallon bare steel gasoline tank installed in 1988, a 1,000-gallon bare steel "other" tank installed in 1988, and a 1,000-gallon bare steel waste oil tank installed in 1988.
- Hazardous Waste Manifest Database – Records regarding hazardous waste generation were available from 1986 to 2003. Hazardous wastes generated at the site and shipped offsite for disposal include: waste paint related material, waste flammable liquid, hazardous waste liquid, waste combustible liquid, waste petroleum distillates, and caustic alkali liquid. The flammable liquid, waste paint related material, and caustic alkali liquid are listed as F003 and F005 wastes,

which are classified as non-halogenated solvents. Hazardous waste liquid is listed as D008, which is classified as lead containing. A copy of the hazardous waste manifest database is included in Appendix B.

- Property Transfer Program – This site is listed as having filed a Form I in 1988 and a Form I in 1997. Paul Parsons is listed as the Certifying Party for the 1997 Form I filing.

Parcel 12 – 780 Farmington Avenue

Site Name – Sanitary Services

- Emergency Response Notification Site – This site is listed as having had a release of approximately 30 gallons of diesel fuel on October 9, 1999 as the result of an accident. The spill could not be contained due to heavy rain.
- Spills – Approximately 65 gallons of diesel fuel were released on October 9, 1999 when a truck saddle tank ruptured. The spill was cleaned and the spill incident is listed as closed.

Parcel 14 – 784-788 Farmington Avenue

Site Name – Nagle & Son / Colonial Travel (784 Farmington Ave.)

- Spills – This site is listed as having had a release of No. 2 fuel oil associated with a leaking 1,000-gallon UST on April 14, 1994. A soil confirmation sample was reportedly obtained for laboratory analysis. The UST and approximately 50 cubic yards of contaminated soil were removed and the spill case is listed as closed.

Site Name – Chuck's Steakhouse (788 Farmington Ave.)

- Spills – This site is listed as having had a release of No. 2 fuel oil associated with two USTs including a 1,000-gallon UST and a 550-gallon UST on April 15, 1994. The USTs and approximately 20 cubic yards of contaminated soil were removed and the spill case is listed as closed. Due to the proximity of the contaminated soil to the foundation wall of the building, some petroleum contaminated soil was left in place.

Parcel 18 – 806 Farmington Avenue

Site Names – Farmington Country Rd and Farmington Country Club

- LUST – A leaking 1,000-gallon No. 2 fuel oil UST was reported to the DEP on May 4, 1992. The UST and contaminated soils were removed. Remediation is listed as completed.
- Spills – This site is listed as having had a release of No. 2 fuel oil associated with a leaking 1,000-gallon UST on April 15, 1992. The UST and approximately 40 cubic yards of contaminated soil were removed and the spill case is listed as closed. Two additional USTs were also removed including a 1,000-gallon gasoline UST and a 500-gallon diesel UST. These two USTs were not reported to be leaking upon removal.
- Registered USTs – This site is listed as having three USTs removed from the site. These USTs included two 1,000-gallon gasoline tanks installed in 1979 and 1980 and one 550-gallon gasoline tank installed in 1983.

Parcel 19 – 819 Farmington Avenue

Site Name – Stitch Development

- LUST – A leaking oil UST was reported to the DEP on November 17, 1988. The UST and contaminated soils were removed. Remediation is listed as completed.

4.0 ENVIRONMENTAL SETTING

4.1 Surface Water

The Farmington River is located directly to the west of the project corridor. According to the DEP Water Quality Classifications Map of the Connecticut River and Southcentral Coastal Basins, dated 1993, the Farmington River a Class "B" surface water body. Surface waters of this designation are known or presumed by the DEP to be suitable for habitat for fish and other aquatic life and wildlife, recreation, navigation, and a water supply for industry or agriculture.

4.2 Groundwater

According to the above referenced DEP map, groundwater within the project corridor is classified as "GA". "GA" classified groundwater is considered by the DEP to be located within the area of existing private water supply wells or an area with the potential to provide water to public or private water supply wells. The DEP presumes that groundwater within a "GA" area is suitable for human consumption without treatment. The DEP's goal is to maintain "GA" groundwater quality.

Based on topography and the presence of the Farmington River, groundwater throughout the majority of the project corridor is anticipated to flow in a west northwest direction.

4.3 Surficial Geology

According to the Surficial Geologic Map of the New Britain Quadrangle, dated 1959, the surficial geology of the project corridor consists of kame terrace deposits, which are described as reddish-brown sand and gravel with stones generally less than six inches in diameter.

4.4 Bedrock Geology

According to the Bedrock Geological Map of the New Britain Quadrangle, dated 1966, bedrock below the entire project corridor is identified as New Haven Arkose, which is described as pale reddish-brown to grayish-red, coarse to fine grained, sandstone, siltstone, and silty shale.

5.0 EVALUATION AND SUMMARY

The relative environmental risk associated with each parcel within the project corridor was based on the current and historic uses of the individual parcels. Each parcel within the project corridor was evaluated to determine if it had a low, moderate, or high risk of being impacted by a release of hazardous wastes, contaminated materials, or other regulated substances. Parcels were assigned a risk category based on the risk classification criteria provided in the ConnDOT, Division of Environmental Compliance On-Call Contaminated Soil/Groundwater Scopes Manual, dated 2003.

In general, parcels that appeared to be relatively free of environmental concerns such as those occupied by residential properties, historically vacant land, restaurants, and retail facilities were assigned a low risk and were not recommended for further investigation.

Parcels currently or historically occupied by facilities identified to have potentially stored or utilized minor quantities of hazardous materials and/or regulated compounds such as institutional facilities, hospitals, commercial facilities, and parcels with historic commercial uses were assigned a moderate risk. Parcels assigned a moderate risk designation were not directly observed to have hazardous materials and/or regulated substances stored on-site or evidence of processes that may utilize or generate hazardous materials/wastes and/or regulated compounds at the time of the initial site survey.

A high risk designation was assigned to parcels currently or historically occupied by facilities that typically store or utilize hazardous materials/wastes and/or regulated substances, that conduct activities that are conducive to a chemical release(s), that were directly observed to have visual evidence of a release, or parcels for which records were identified documenting the occurrence of a significant release on the parcel. Typically, high risk parcels are currently or historically occupied by facilities such as manufacturing plants, vehicle dealerships, utility transmission facilities, "Establishments" as defined by the Transfer Act (auto body shops, drycleaners, generators of hazardous wastes, etc.), waste treatment/ disposal sites, transportation facilities, petroleum wholesalers and retailers, mining operations, high intensity agriculture, etc.

Table 1 provides a summary of information regarding each of the parcels within the project corridor obtained during completion of this Task 110. Included in the table is a summary of the current and historic uses of the parcels and the resulting risk designation. The following section provides a detailed evaluation and summary of the environmental concerns identified at each parcel assigned either a moderate or high risk designation and the reasoning used to arrive at that designation.

Seven parcels within the project corridor were assigned a high risk designation and six parcels were assigned a moderate risk designation. Figure 2 depicts the locations of the moderate and high risk designated parcels.

5.1 High Risk Parcels

Parcel 3 – 750 Farmington Avenue – This commercial parcel was assigned a high risk because the parcel is an Establishment due to the filing of two Form I Transfer Act forms, one in 1988 and another in 1997. The parcel has a significant commercial history as an automobile dealership, auto body shop, and automotive service center. Automotive operations have been conducted at the site since the late 1920s. The facility has been documented to have used and produced significant quantities of regulated and hazardous materials/wastes. Multiple gasoline and diesel fuel USTs have been documented to currently exist or to have been removed from the site. This site is listed as a CERCLIS NFRAP site and a State Site due to releases of chlorinated VOCs, semi-VOCs, and metals.

Due to the historic operations at this parcel and the reported presence of subsurface contamination, it was determined that there is a significant potential for subsurface contamination at or migrating from this parcel. *A partial or total take of this parcel is proposed.*

Parcel 7 – 772 Farmington Avenue – This commercial parcel was assigned a high risk due to the historic presence of a potential drycleaner in 1955. Also, historic documentation indicates that a gasoline UST and an oil UST were present at the site along the southeast corner of the building. The potential exists for soil and groundwater contamination at this parcel.

Due to historic operations and the historic presence of two USTs at this parcel, it was determined that there is a significant potential for subsurface contamination at or migrating from this parcel.

Parcel 13 – 781 Farmington Avenue – This commercial parcel was assigned a high risk because the parcel was historically utilized as an automobile repair garage and "platter" from approximately 1946 to 1973. Historical information indicates that two gasoline USTs existed at the site. It is not known if these USTs were removed.

Due to the historic operations and the historic presence of two gasoline USTs at this parcel, it was determined that there is a significant potential for subsurface contamination at or migrating from this parcel.

Parcel 14 – 784-788 Farmington Avenue – This commercial parcel was assigned a high risk because a drycleaner may have operated on this parcel in the late 1950s/early 1960s. Two leaking heating oil USTs and 70 cubic yards of contaminated soil were removed from the site in 1994. Some soil contamination was documented to remain in place adjacent to Building 2 (Chuck's Steakhouse). A fill pipe for a heating oil UST was observed adjacent to Building 1. The age, capacity, and condition of this UST are unknown. Historic information indicates that two gasoline USTs were located to the west of Building 1. It is not known if these USTs were removed.

Due to the historic operations at this parcel and the presence of documented releases, it was determined that there is a significant potential for subsurface contamination at or migrating from this parcel. *A partial take of this parcel is proposed.*

Parcel 18 – 806 Farmington Avenue – This commercial parcel was assigned a high risk because a heating oil UST was documented to have leaked at the site, resulting in significant subsurface contamination. The UST and approximately 40 cubic yards of contaminated soil were removed.

Due to the release at this parcel, it was determined that there is a significant potential for subsurface contamination at or migrating from this parcel. *A partial take of this parcel is proposed.*

Parcel 19 – 819 Farmington Avenue – This commercial parcel was assigned a high risk because an oil UST was documented to have leaked at the site, resulting in subsurface contamination.

Due to the release at this parcel, it was determined that there is a significant potential for subsurface contamination at or migrating from this parcel.

Parcel 21 – 838-850 Farmington Avenue – This commercial parcel was assigned a high risk because a drycleaner may have operated on this parcel from approximately 1973 to 1979. This parcel may also be located downgradient or cross gradient from two gasoline stations and an operating drycleaner.

Due to the historic operations at this parcel and the presence of two gasoline stations and a drycleaner, it was determined that there is a significant potential for subsurface contamination at or migrating from/onto this parcel.

5.2 Moderate Risk Parcels

Parcel 2 – 729 Farmington Avenue – This residential parcel was assigned a moderate risk due to a reported leaking heating oil UST in 2001 and the use of a portion of the parcel as an orchard. The UST and petroleum contaminated soil were removed. The potential exists for soil and groundwater contamination at this parcel.

Parcel 5 – 768 Farmington Avenue – This commercial parcel was assigned a moderate risk due to the historic presence of an oil UST between the building and the roadway of Farmington Avenue. It is not known if this UST has been removed. The potential exists for soil and groundwater contamination at this parcel. *A partial or total take of this parcel is proposed.*

Parcel 12 – 780 Farmington Avenue – This commercial parcel was assigned a moderate risk due to the presence of a photographer from approximately 1979 to the present. Hazardous chemicals, including mercury and silver, are used in the development of photographs.

Parcel 15 – 790 Farmington Avenue – This commercial parcel was assigned a moderate risk due to its use as a commercial office building.

Parcel 22 – 2-4 Garden Street – This commercial office building parcel was assigned a moderate risk due to the historic presence of a gasoline UST along the northwest corner of the existing building. It is not known if this UST has been removed. The potential exists for soil and groundwater contamination at this parcel.

Parcel 23 – 2 High Street – This commercial parcel was assigned a moderate risk due to its commercial use as a bank.

6.0 CONCLUSIONS

The Task 110 Corridor Land Use Evaluation included the assessment of a total of 33 parcels, of which seven were assigned a high risk designation and six were assigned a moderate risk designation. The locations of these high and moderate risk parcels are depicted on Figure 2.

Based upon information obtained during the windshield site survey, a compilation of current and historic land use, and a review of regulatory environmental databases for the parcels located within the project corridor, it is recommended that a Task 210/211 Subsurface Site Investigation/Field Sampling be performed in all areas of anticipated intrusive construction activities and/or right-of-way acquisitions on or adjacent to the moderate and high risk parcels discussed in Section 5.0.

7.0 LIMITATIONS

All work product and reports provided in connection with the performance of this Corridor Land Use Evaluation are subject to the following limitations:

This investigation and report were conducted and prepared on behalf of and for the exclusive use of ConnDOT and its counsel. No other entity or party may rely upon the results of the investigation or the contents of this report for any reason or purpose whatsoever.

The observations, findings, and conclusions provided in this report were based on Diversified Technology Consultants, Inc. (DTC) observations of site conditions at the time of the site inspection (from public right-of-ways), a review of information and representations made by other parties, and on information contained in the files of State and/or municipal agencies made available to DTC at the time of the site assessment. To the extent that such files are missing, incomplete or not provided, DTC is not responsible. Although there may have been some degree of overlap in the information provided by these various sources, DTC did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of this site assessment.

This Task 110 Corridor Land Use Evaluation did not involve the sampling of soil, surface water, soil vapor, and/or groundwater.

DTC's work presented herein was performed in accordance with generally accepted practices of other consultants undertaking similar studies at the same time and in the same geographical area, and DTC observed that degree of care and skill generally exercised by other consultants under similar circumstances and conditions. DTC's findings and conclusions must be considered not as scientific certainties, but as a professional opinion concerning the significance of the limited data gathered during the course of this Task 110. Specifically, DTC does not and cannot represent that the individual parcels within the project corridor do not contain hazardous material, oil, or other latent conditions beyond that observed by DTC during completion of this Task 110.

No other warranty, expressed or implied, is made as to the professional opinions included by DTC in this report.

Notice of Disclaimer

Due to the limitations, constraints, inaccuracies and incompleteness of government information and computer mapping data currently available to FirstSearch Technology Corp., certain conventions have been utilized in preparing the locations of all federal, state and local agency sites residing in FirstSearch Technology Corp.'s databases. All EPA NPL and state landfill sites are depicted by a rectangle approximating their location and size. The boundaries of the rectangles represent the eastern and western most longitudes; the northern and southern most latitudes. As such, the mapped areas may exceed the actual areas and do not represent the actual boundaries of these properties. All other sites are depicted by a point representing their approximate address location and make no attempt to represent the actual areas of the associated property. Actual boundaries and locations of individual properties can be found in the files residing at the agency responsible for such information.

Waiver of Liability

Although FirstSearch Technology Corp. uses its best efforts to research the actual location of each site, FirstSearch Technology Corp. does not and can not warrant the accuracy of these sites with regard to exact location and size. All authorized users of FirstSearch Technology Corp.'s services proceeding are signifying an understanding of FirstSearch Technology Corp.'s searching and mapping conventions, and agree to waive any and all liability claims associated with search and map results showing incomplete and or inaccurate site locations.
